

ITT Technical Institute
AP2630T
Human Anatomy and Physiology II
Onsite Course

SYLLABUS

Credit hours: 4.5

Contact/Instructional hours: 67 (41 Theory Hours, 26 Lab Hours)

Prerequisite(s) and/or Corequisite(s):

Prerequisites: AP2530T Human Anatomy and Physiology I or equivalent

Course Description:

Building upon Human Anatomy and Physiology I, this course focuses on the cardiovascular, lymphatic, respiratory, digestive, urinary and reproductive systems, as well as metabolism, acid-base balance, fluid and electrolyte balance and nutrition. This course includes a laboratory component.

Where Does This Course Belong?

Human Anatomy and Physiology I and II are part of the General Education Science curriculum.

Program Information

Program Scope and Core Content Areas

General Studies courses are interdisciplinary courses that support both core and general education courses.

General Education courses include courses in the humanities, composition, mathematics, the sciences, and the social sciences.

Program Goals and Objectives

General Education courses are designed to provide ITT Tech students with a well-rounded education in the context of their technical programs. Each course emphasizes one or more of ITT Tech's General Education Student Learning Outcomes.

1. Demonstrate personal responsibility.
2. Analyze information.
3. Solve complex problems.
4. Communicate effectively in oral, written and visual forms.
5. Contribute as a member of a team.
6. Pursue lifelong learning opportunities.

Career Impact

General Education courses provide breadth to a core technical program. Courses in General Education are intended to broaden a student's educational experience, and therefore, broaden his/her perspective.

NOTE: Refer to the catalog for the state-specific course and program information, if applicable.

Course Summary

Major Instructional Areas

1. The cardiovascular system
2. The lymphatic system
3. The immune system
4. The respiratory system
5. The digestive system
6. The urinary system
7. Fluid and acid-base balance
8. The reproductive system
9. Growth and development

Course Objectives

1. Describe the distribution, regulation, and protection functions of blood.
2. Examine the structure, function, and common disorders affecting the cardiovascular system.
3. Examine the structure, function, and common disorders affecting the lymphatic system.
4. Examine the structure, function, and common disorders affecting the immune system.
5. Examine the structure, function, and common disorders affecting the respiratory system.
6. Examine the structure, function, and common disorders affecting the digestive system.
7. Examine the structure, function, and common disorders affecting the urinary system.
8. Explain how the body's fluids help maintain homeostasis in the body.
9. Examine the structure, function, and common disorders affecting the reproductive system.
10. Describe the events of embryonic development from zygote to parturition.
11. Describe the role genetics and heredity play in anatomy and physiology.
12. Describe the interactions between each of the organ systems in the human body.
13. Demonstrate knowledge and laboratory skills required for dissection.
14. Use the ITT Tech Virtual library and other ITT Tech resources to research various topics as appropriate.

Detailed Topical Outline

1. Blood Composition
 - 1.1. Blood Composition, Erythrocytes, Leukocytes, and Platelets
 - 1.1.1. Blood

1.2. Blood and Bleeding Disorders

1.2.1. Tell Me About Blood

1.3. ABO Blood Typing

1.3.1. Components of Blood: Identification of RBCs, WBCs, and Platelets and Blood Typing

2. Heart and Blood Vessels

2.1. Gross Anatomy of the Heart

2.1.1. Cardiac, Conduction, Cycle, and Output

2.2. Blood Vessels

2.2.1. Blood Vessels

2.2.2. Blood Vessel Identification

2.2.3. Sheep Heart Dissection

2.2.4. Blood Vessel Dissection

2.3. Age-Related Changes to the Heart

2.3.1. Age-Related Changes that Occur in the Cardiovascular System

2.4. Effect of Exercise on the Heart

2.4.1. Heart Rate Calculations

2.5. Physiology of the Heart

2.5.1. The Heart Structure and Functions

3. The Lymphatic System

3.1. Lymphatic Vessels

3.1.1. Organs of the Lymphatic System

3.1.2. Disorders and Diseases Affecting the Lymphatic System

3.2. Lymphatic Tissues

3.2.1. Lymphatic System

4. The Immune System

4.1. Innate Versus Adaptive Immunity

4.1.1. The Immune System

4.2. Hypersensitivity

4.2.1. Hypersensitivity

4.3. Ouchterlony Test

4.3.1. Ouchterlony Test

4.4. Immune System Disorders

4.4.1. Disorders Affecting the Immune System

5. The Respiratory System

5.1. Functional Anatomy of the Respiratory System

5.1.1. Functional Anatomy of the Respiratory System

5.1.2. Respiratory System Structure and Function

5.2. Mechanisms of Breathing

5.2.1. Mechanisms of Breathing

5.2.2. Pulmonary Ventilation

5.3. Gas Exchange

5.3.1. Gas Exchange

5.4. Disease and Conditions Associated with the Respiratory System

5.4.1. Case Study: Cari's Story

6. The Digestive System

6.1. Functional Anatomy of the Digestive System

6.1.1. Structure and Function of the Gastrointestinal Tract

6.2. Digestive Processes

6.2.1. Chemical Digestion and Absorption

6.3. Nutrition: Vitamins, Minerals, and Water

6.3.1. Nutrition and Metabolism

6.4. Diseases and Conditions Associated with the Digestive System

6.4.1. Case Study: Zachary's Story

6.4.2. Age-Related Changes and Diseases Affecting the Digestive System

7. The Urinary System

7.1. Functional Anatomy of the Urinary System

7.1.1. Gross and Microscopic Anatomy and Function of the Urinary System

7.1.2. Urinary System Structure and Function

7.2. Urine Composition and Formation

7.2.1. Urine Formation

7.2.2. Urine Formation and Urinalysis

7.3. Regulation of Urine Concentration and Volume

7.3.1. Urinary System Homeostasis

7.3.2. Case Study: Sam's Story

8. Fluid and Acid-Base Balance

8.1. Body Fluids and Composition

8.1.1. Buffer Systems: The First Responders

8.1.2. The Respiratory System and Body Homeostasis

8.2. Water Balance, Electrolyte Balance, and Acid-Base Balance

8.2.1. Kidneys and Acid-Base Balance

8.2.2. Kidneys and Fluid Balance

8.2.3. Case Studies: The Case of the Man with the Swollen Kidneys and The Case of the Thirsty Woman

8.2.4. Carbon Dioxide and pH

- 8.2.5. Mechanisms of Blood pH Balance
- 9. The Reproductive System
 - 9.1. Functional Anatomy of the Male and Female Reproductive Systems
 - 9.1.1. Functional Male Anatomy
 - 9.1.2. Functional Female Anatomy
 - 9.1.3. Male Reproductive System Structure and Function
 - 9.1.4. Female Reproductive System Structure and Function
 - 9.1.5. Using Your Knowledge
 - 9.2. Physiology Female Reproductive Cycle
 - 9.2.1. The Female Reproductive Cycle
 - 9.3. Diseases and Conditions Affecting the Reproductive Systems
 - 9.3.1. Sexually Transmitted Infections Game
- 10. Human Development
 - 10.1. Fertilization and Embryonic Development
 - 10.1.1. Fertilization and Development Overview
 - 10.1.2. Fertilization and Development
 - 10.1.3. Using Your Knowledge
 - 10.2. Parturition and Lactation
 - 10.2.1. Labor and Lactation

- Reproductive System
- Human Development

Suggested Learning Approach

In this course, you will be studying individually and within a group of your peers. As you work on the course deliverables, you are encouraged to share ideas with your peers and instructor, work collaboratively on projects and team assignments, raise critical questions, and provide constructive feedback.

Use the following advice to receive maximum learning benefits from your participation in this course:

DO	DON'T
<ul style="list-style-type: none"> ▪ Do take a proactive learning approach ▪ Do share your thoughts on critical issues and potential problem solutions ▪ Do plan your course work in advance ▪ Do explore a variety of learning resources in addition to the textbook ▪ Do offer relevant examples from your experience ▪ Do make an effort to understand different points of view ▪ Do connect concepts explored in this course to real-life professional situations and your own experiences 	<ul style="list-style-type: none"> ▪ Don't assume there is only one correct answer to a question ▪ Don't be afraid to share your perspective on the issues analyzed in the course ▪ Don't be negative about the points of view that are different from yours ▪ Don't underestimate the impact of collaboration on your learning ▪ Don't limit your course experience to reading the textbook ▪ Don't postpone your work on the course deliverables – work on small assignment components every day

Instructional Methods

The curriculum is designed to encourage a variety of teaching strategies that support the course objectives while fostering higher cognitive skills. This course will employ multiple methods to deliver content and inspire and engage you, including lectures, collaborative learning options, and hands-on activities. This course is composed of Theory and Lab components. Your progress will be regularly assessed through Case Studies, Assignments, Exercises, Labs, and a Final Exam.

Out-of-Class Work

For purposes of defining an academic credit hour for Title IV funding purposes, ITT Technical Institute considers a quarter credit hour to be the equivalent of: (a) at least 10 clock hours of classroom activities

and at least 20 clock hours of outside preparation; (b) at least 20 clock hours of laboratory activities; or (c) at least 30 clock hours of externship, practicum or clinical activities. ITT Technical Institute utilizes a “time-based option” for establishing out-of-class activities which would equate to two hours of out-of-class activities for every one hour of classroom time. The procedure for determining credit hours for Title IV funding purposes is to divide the total number of classroom, laboratory, externship, practicum and clinical hours by the conversion ratios specified above. A clock hour is 50 minutes.

A credit hour is an artificial measurement of the amount of learning that can occur in a program course based on a specified amount of time spent on class activities and student preparation during the program course. In conformity with commonly accepted practice in higher education, ITT Technical Institute has institutionally established and determined that credit hours awarded for coursework in this program course (including out-of-class assignments and learning activities described in the “Course Outline” section of this syllabus) are in accordance with the time-based option for awarding academic credit described in the immediately preceding paragraph.

Course Outline

Unit 1: BLOOD COMPOSITION				Total outside work: 7 hours
Upon completion of this unit, students are expected to: <ul style="list-style-type: none"> ▪ List the formed elements and describe the fluid portion of the blood. ▪ Explain the process of hemopoieses. ▪ Describe a mature red blood cell and the function of hemoglobin. ▪ Recognize the metabolites of red blood cells and the location of phagocytes that destroy red blood cells after the 120 day life cycle. ▪ Explain the process of erythropoiesis. ▪ Differentiate between blood types based on the A and B surface antigens. ▪ Identify the granular and agranular white blood cells, describing their roles in inflammation and infection. ▪ Describe a platelet and its role in reducing blood loss. ▪ Explain the process and role of hemostasis. 				
READING ASSIGNMENT	Author	Chapter/Title	Pages (if necessary)	Total Pages
	Jenkins	Chapter 18	pp. 614-641	28
OUT-OF-CLASS WORK	Activity			Estimated Time
	Complete the reading assignment			3 hrs
	Work on Unit 1 Case Study 1: Tell Me About Blood			2 hrs
	Work on Unit 1 Lab 1: Components of Blood			2 hrs

Unit 2: HEART AND BLOOD VESSELS

Upon completion of this unit, students are expected to:

- Describe the location of the heart in the mediastinum and the pericardial layers.
- Locate the four chambers of the heart, following blood flow through and into and out of the heart via the major blood vessels.
- Describe the function and operation of the heart valves.
- Differentiate between the pulmonary and systemic circuits associated with the right and left heart, respectively.
- Explain the cardiac conduction system that coordinates effective pumping of the heart.
- Explain the different phases of an electrocardiogram.
- Explain the phases of the cardiac cycle, including atrial and ventricular systole and diastole.
- Explain the effect of changes in heart rate and stroke volume on cardiac output.
- Describe the three tissue layers of most blood vessels.
- Differentiate between elastic arteries, muscular arteries, and arterioles
- Describe the structure and function of capillaries.
- Explain how venules and veins function and return blood to the heart.
- Explain how the roles of pressure and resistance to blood flow are interrelated.
- Explain how blood pressure is regulated by neural and hormonal feedback systems.
- Discuss blood and pulse pressures and their value to cardiovascular assessment.
- Differentiate between the pulmonary and systemic circulation.
- Identify the major systemic veins.

**Total
outside
work:**
9 hours

READING ASSIGNMENT	Author	Chapter/Title	Pages (if necessary)	Total Pages
	Jenkins	Chapters 19-20	642-741	100
OUT-OF-CLASS WORK	Activity			Estimated Time
	Complete the reading assignment			4 hrs
	Work on Unit 2 Assignment 1: Cardiac Conduction, Cycle, and Output			1 hr
	Work on Unit 2 Case Study 1: Age-Related Changes that Occur in the Cardiovascular System			2 hrs
	Work on Unit 2 Lab 1: The Heart Structure and Function			2 hrs

	Lab	Unit 10 Lab 1: Using Your Knowledge (Assigned in Unit 10)		2.5%
	Exam	Final Exam		25%

Note: Your instructor may add a few learning activities that are ungraded.

Evaluation and Grading

Evaluation Criteria

The graded assignments will be evaluated using the following weighted categories:

Category	Weight
Assignment	15%
Case Study	15%
Exercise	15%
Lab	30%
Exam	25%
TOTAL	100%

Grade Conversion

The final grades will be calculated from the percentages earned in the course, as follows:

Grade	Percentage
A (4.0)	90–100%
B+ (3.5)	85–89%
B (3.0)	80–84%
C+ (2.5)	75–79%
C (2.0)	70–74%
D+ (1.5)	65–69%
D (1.0)	60–64%
F (0.0)	<60%

Academic Integrity

All students must comply with the policies that regulate all forms of academic dishonesty or academic misconduct, including plagiarism, self-plagiarism, fabrication, deception, cheating, and sabotage. For more information on the academic honesty policies, refer to the Student Handbook and the Course Catalog.
