

ITT Technical Institute

NT2640

IP Networking

Onsite Course

SYLLABUS

Credit hours: 4.5

Contact/Instructional hours: 56 (34 Theory Hours, 22 Lab Hours)

Prerequisite(s) and/or Corequisite(s):

Prerequisites: NT1210 Introduction to Networking or equivalent

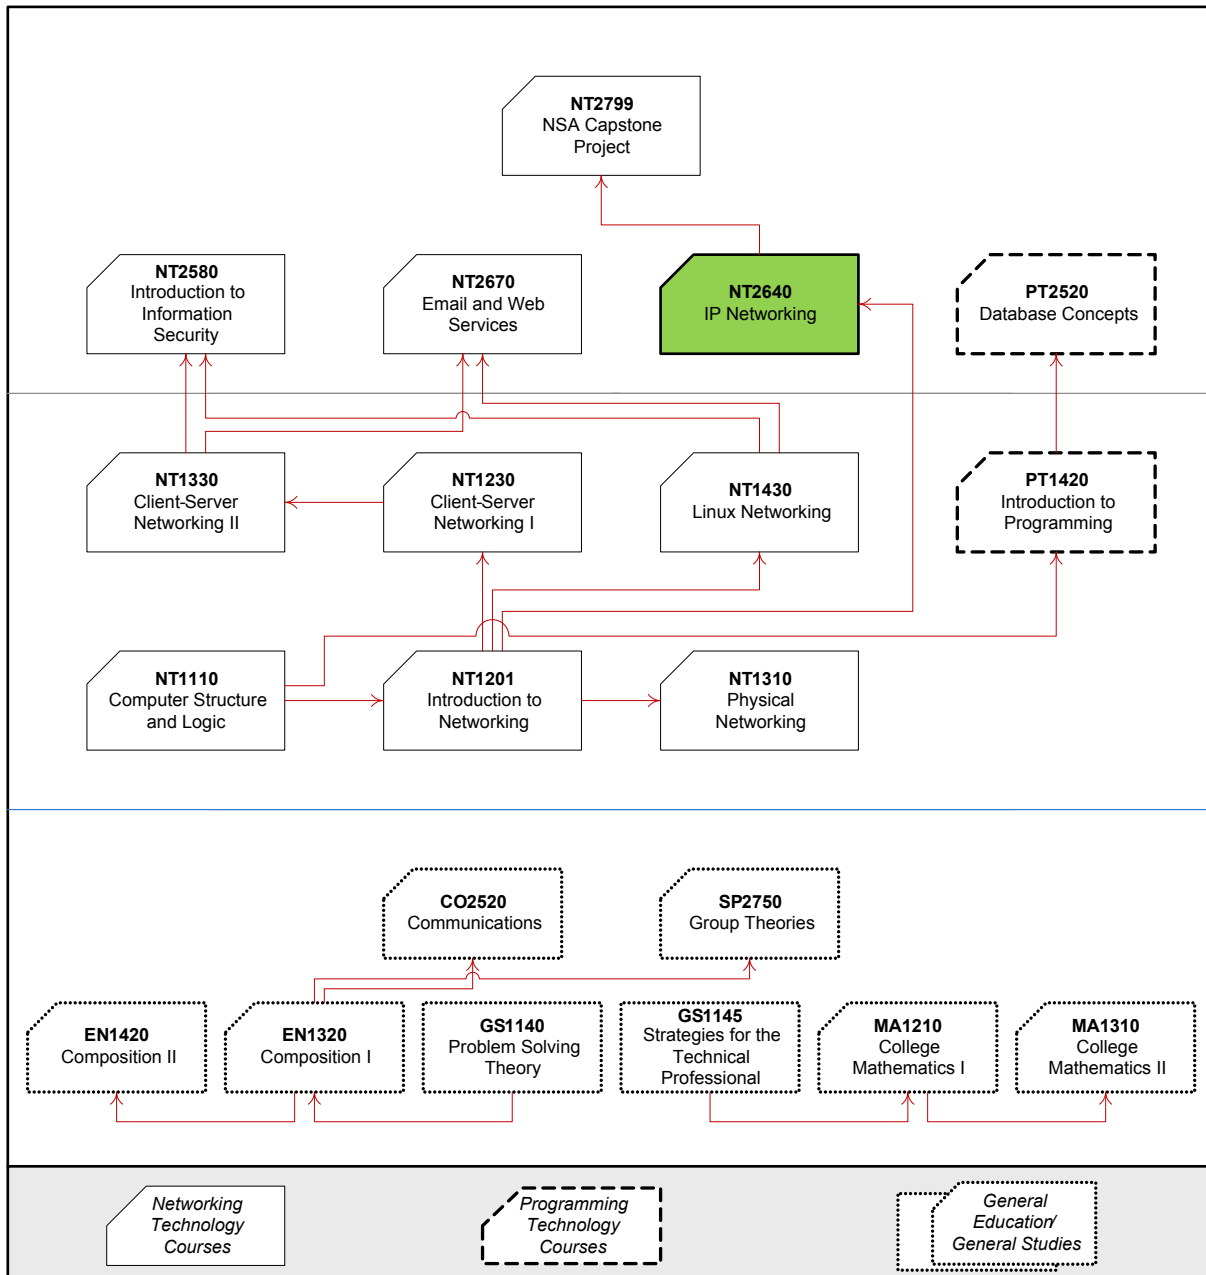

Course Description:

This course explores network design and implementation by applying the TCP/IP protocols to provide connectivity and associated services. Planning and deployment of network addressing structures, as well as router and switch configurations, are also examined.

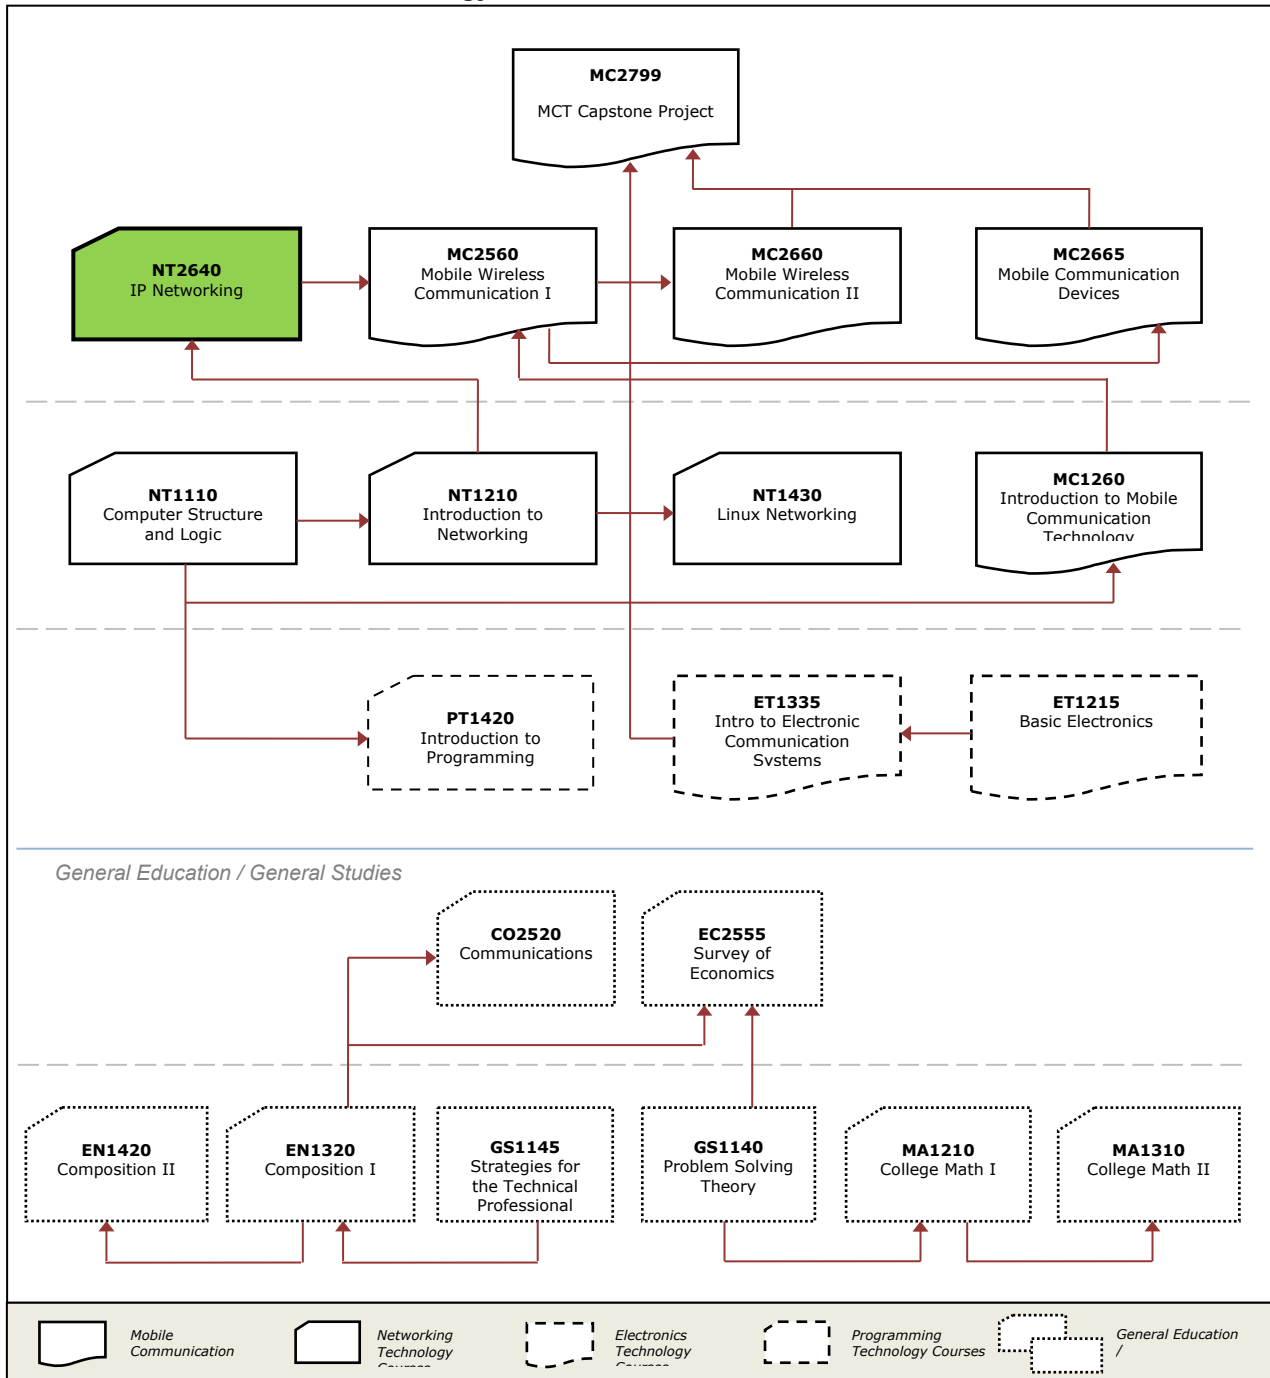

Where Does This Course Belong?

This course is required in the associate degree program in Network Systems Administration and associate degree in Mobile Communications Technology. The following diagrams indicate how this course relates to other courses in respective programs:

Network Systems Administration

Mobile Communications Technology

Course Summary

Major Instructional Areas

- TCP/IP and OSI network reference models
- IP and associated protocols including TCP, UDP, ICMP, and ARP
- IP addressing and subnet design including variable-length subnet mask (VLSM)
- Routing principals and dynamic routing protocols including basic configuration
- Ethernet switching principals and concepts including basic configuration
- Local area network (LAN) and wide area network (WAN) concepts and basic implementation tasks
- Cisco router hardware and software (IOS) overview including basic configuration
- Introduction to IP network troubleshooting including routing, switching, and WAN

Course Objectives

This course has the following instructional objectives:

1. Apply TCP/IP and OSI network reference model concepts and IP protocols (TCP/UDP/ICMP) in implementation and support of networks.
2. Apply procedures of the Cisco IOS CLI environment to support and configure Cisco internetworking devices.
3. Apply networking concepts and theories to provide IP networking troubleshooting tasks.
4. Apply principles of IP address subnetting design including the use of variable-length subnet masks (VLSM).
5. Apply foundational concepts of IP routing including dynamic routing protocols (RIP, EIGRP, and OSPF).
6. Apply foundational concepts of bridging and switching and other relevant local area network (LAN) technologies.
7. Describe the concepts of collision and broadcast domains, and address resolution protocols.
8. Apply the fundamental concepts of wide area networks (WANs), including point-to-point links and virtual private network WAN technologies such as Frame Relay.

Learning Outcomes

Upon completion of this course the student will be able to:

1. Demonstrate the ability to design and implement an IP address scheme including subnet design with VLSM.

2. Demonstrate basic competencies in Cisco IOS CLI environment including operational and configuration commands.
3. Demonstrate basic competencies in IP routing configuration including the configuration of dynamic routing protocols (RIP, OSPF, and EIGRP).
4. Demonstrate basic competencies in LAN configuration including Ethernet switching and VLANs.
5. Demonstrate basic competencies in WAN configuration including point-to-point links and Frame Relay.
6. Demonstrate the ability to configure and troubleshoot IP routing including dynamic routing protocols OSPF and EIRGP.

Course Plan

Suggested Learning Approach

In this course, you will be studying individually and within a group of your peers. As you work on the course deliverables, you are encouraged to share ideas with your peers and instructor, work collaboratively on projects and team assignments, raise critical questions, and provide constructive feedback.

Use the following advice to receive maximum learning benefits from your participation in this course:

DO	DON'T
<ul style="list-style-type: none">▪ Do take a proactive learning approach.▪ Do share your thoughts on critical issues and potential problem solutions.▪ Do plan your course work in advance.▪ Do explore a variety of learning resources in addition to the textbook.▪ Do offer relevant examples from your experience.▪ Do make an effort to understand different points of view.▪ Do connect concepts explored in this course to real-life professional situations and your own experiences.	<ul style="list-style-type: none">▪ Don't assume there is only one correct answer to a question.▪ Don't be afraid to share your perspective on the issues analyzed in the course.▪ Don't be negative about the points of view that are different from yours.▪ Don't underestimate the impact of collaboration on your learning.▪ Don't limit your course experience to reading the textbook.▪ Don't postpone your work on the course deliverables – work on small assignment components every day.

Course Outline

Unit 1: THE TCP/IP MODEL, LANS, WANS, AND IP NETWORKS Upon completion of this unit, students are expected to:			Unit Duration: <i>Onsite: 1 week</i>
<ul style="list-style-type: none"> Demonstrate basic competencies in LAN configuration including Ethernet switching and VLANs. Demonstrate basic competencies in WAN configuration including point-to-point links and Frame Relay. 			
READING ASSIGNMENT	GRADED ACTIVITIES / DELIVERABLES		
	Grading Category	Activity/Deliverable Title	Grade Allocation (% of all graded work)
<ul style="list-style-type: none"> Chapter 1: The TCP/IP and OSI Networking Models Chapter 2: Fundamentals of LANS Chapter 3: Fundamentals of WANS Chapter 4: Class A, B, and C Networks 	Assignments	Assignment 1.1:IP Addresses Classes and Special Use IP Address Space	2.5%
	Discussions	Discussion 1.1: OSI Networking Mode and LAN & WAN Terminology	1%
	Labs†	Lab1.1: ICND1 Switch CLI Exec Mode	2.5%

Unit 2: TCP/IP NETWORK, TRANSPORT, AND APPLICATION LAYERS Upon completion of this unit, students are expected to:			Unit Duration: <i>Onsite: 1 week</i>
<ul style="list-style-type: none"> Demonstrate basic competencies in LAN configuration including Ethernet switching and VLANs. Demonstrate basic competencies in WAN configuration including point-to-point links and Frame Relay. 			
READING ASSIGNMENT	GRADED ACTIVITIES / DELIVERABLES		
	Grading Category	Activity/Deliverable Title	Grade Allocation (% of all graded work)
<ul style="list-style-type: none"> Chapter 5: Fundamentals of IP Addressing and Routing Chapter 6: Fundamentals of 	Assignments	Assignment 2.1:Networking Protocol Numbers	2.5%
	Discussions	Discussion 2.1: IP Addressing and Routing -Exercise	1%

	Labs†	Lab 2.1: <ul style="list-style-type: none"> • Switch CLI Exec Mode • Switch CLI Configuration Process I • Switch CLI Configuration Process II • Router CLI Exec Mode I • Router CLI Exec Mode II • Route CLI Configuration Process • Setting Switch Passwords • Setting Router Passwords • Configuring Hostnames • Subnetting Lab 1 • Subnetting Lab 2 	2.5%
--	-------	---	------

Unit 3: IP SUBNETTING AND BASIC ROUTER CONFIGURATION **Unit Duration:**
Onsite: 1 week

Upon completion of this unit, students are expected to:

- Demonstrate basic competencies in LAN configuration including Ethernet switching and VLANs.
- Demonstrate basic competencies in WAN configuration including point-to-point links and Frame Relay.

READING ASSIGNMENT	GRADED ACTIVITIES / DELIVERABLES		
	Grading Category	Activity/Deliverable Title	Grade Allocation (% of all graded work)
<ul style="list-style-type: none"> • Chapter 8: Perspectives on IPv4 Subnetting • Chapter 9: Subnet Mask Conversion • Chapter 10: Analyzing Existing Subnet Masks • Chapter 11: Operating Cisco Routers 	Assignments	Assignment 3.1: IP Subnetting	0.83%
		Assignment 3.2: Router Configuration	0.83%
		Assignment 3.3: Router/NAT Configuration	0.83%
	Discussion	Discussion 3.1IP Subnetting - Exercise	1%
	Labs†	Lab 3.1 <ul style="list-style-type: none"> • Setting Router passwords • Configuring Router IP settings • Configuring SSH • Terminal History I • Rebuild a Configuration • SSH and Telnet • Basic Router Configuration and Command Line Interface • Switch and Router Security • Subnetting Lab 3 	2.5%

Unit 4: IP ROUTING WITH CONNECTED, STATIC, AND RIP-2 ROUTES **Unit Duration:**
Onsite: 1 week

Upon completion of this unit, students are expected to:

- Demonstrate the ability to design and implement an IP address scheme

including subnet design with VLSM. <ul style="list-style-type: none"> Demonstrate basic competencies in IP routing configuration including the configuration of dynamic routing protocols (RIP, OSPF, and EIGRP). 			
READING ASSIGNMENT	GRADED ACTIVITIES / DELIVERABLES		
	Grading Category	Activity/Deliverable Title	Grade Allocation (% of all graded work)
<ul style="list-style-type: none"> Chapter 12: IP Routing: Static and Connected Routes Chapter 13: Analyzing Existing Subnets Chapter 14: Routing Protocol Concepts and Configuration 	Assignments	Assignment 4.1/ IOS Admin Distance & JUNOS Route Preference	1.25%
		Assignment 4.2: Configuring RIPv2 Routing	1.25%
	Discussion	Discussion 4.1: Analyzing IP Subnets - Exercise	1%

Evaluation and Grading

Evaluation Criteria

The graded assignments will be evaluated using the following weighted categories:

Category	Weight
Discussions	10%
Assignments	25%
Labs	25%
Exams (Midterm and Final)	40%
TOTAL	100%

Grade Conversion

The final grades will be calculated from the percentages earned in the course, as follows:

Grade	Percentage	Credit
A	90–100%	4.0
B+	85–89%	3.5
B	80–84%	3.0
C+	75–79%	2.5
C	70–74%	2.0
D+	65–69%	1.5
D	60–64%	1.0
F	<60%	0.0

Academic Integrity

All students must comply with the policies that regulate all forms of academic dishonesty, or academic misconduct, including plagiarism, self-plagiarism, fabrication, deception, cheating, and sabotage. For more information on the academic honesty policies, refer to the Student Handbook and the Course Catalog.
